Oil and gas operations can be categorized into upstream, midstream and downstream activities. The upstream activity involves oil and gas research and production, the midstream focuses on oil and gas transportation and storage, and the downstream deals with oil and gas refinement and marketing. These seemingly different business activities naturally require specialized and dedicated resources to manage, and there are many stand-alone upstream, midstream and downstream oil and gas operators. In any case, integrated oil and gas companies with both upstream and downstream operations are still a major force within the oil and gas industry.

As a company, we training and certify professionals in the areas of Production Engineering and Operations, Production operations staff, Reservoir engineers, Facilities staff, Drilling and completions Engineers, Field supervisors, Managers and Technicians, Service company Engineers and Managers.
